Claim 5 A rechargeable and removable emergency lamp and headlamp for a motorized vehicle having an internal combustion engine and an electrical system therefor, comprising:

 a lamp having a handle and electrical connections to a first rechargeable battery and to said electrical system, said lamp positioned and used as a headlamp;

 said first rechargeable battery suitable for powering said lamp and not suitable for said electrical system, wherein the lamp has a first electrical connection to the first rechargeable battery for powering the lamp and having a second electrical connection to the vehicle's electrical system, said electrical system including a second rechargeable battery, the first rechargeable battery having a third electrical connection to the vehicle's electrical system for recharging the battery; and

 a first housing in which the lamp is removably retained, the lamp being removable from said housing for use as an emergency light, and when the lamp is in use as an emergency light said first and third electrical connections remain intact and said second electrical connection is disconnected.

Claim 6 The lamp of claim 5, wherein the first housing joins to a second housing attached to the body of the vehicle.

Art Unit: 2875

Claim 8 The lamp of claim 5, wherein the handle is removable.

Claim 9 The lamp of claim 8, wherein the first electrical connection to the lamp runs through the handle.
